

Managing Spam Email

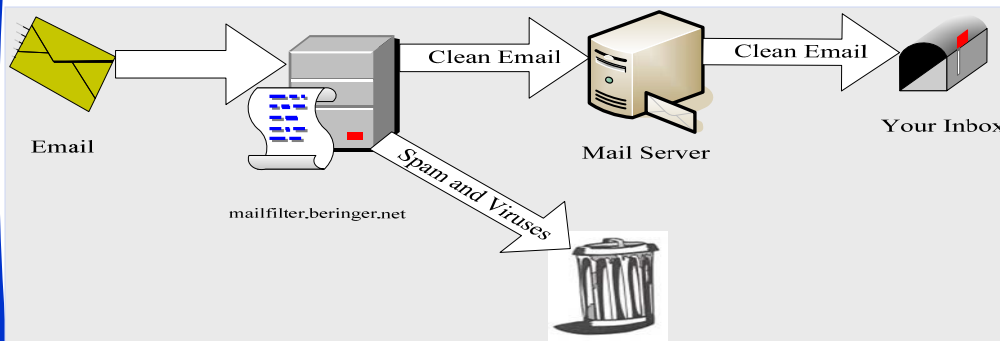

Stop Spam and Viruses before they arrive in your inbox!

Research has found that Spam accounts for nearly 45% of all email and that Spam will increase by 400% in the next few years. Without an anti-spam solution you and your employees must dedicate a considerable amount of time to deal with spam, this decreases productivity and increases frustration. Loss of productivity is the main cost of spam, but there is also the cost of the bandwidth wasted by spam, network storage costs and possible legal liabilities.

Can you afford not to be protected?

In the past the only available solutions for managing spam and other email threats were software based. These products were expensive and required you to purchase hardware to run them on. They also required a significant amount of IT resources in-house to manage these products. We offer a complete hosted solution for managing spam and other email threats.

How It Works

Your email first passes through our Spam firewall. If it is determined to be Spam or infected with a virus it is discarded. Email that passes the Spam firewall is then delivered to your mail server and to your inbox.

Our Hosted Solution includes:

- No Hardware or Software to purchase or maintain.
- No changes to your computer(s).
- Works with your existing email addresses. All you need is your own domain name.
ie:(www.yourcompany.com)
- Stops spam and viruses before they reach your email inbox.
- Intuitive Web Interface allows each user to manage their own quarantine, whitelist and blacklist.
- Hourly updates to Spam and Virus definitions.
- The most accurate filtering technology available!
- Inexpensive Flat Rate-Monthly Pricing:

1-10 Mailboxes - \$49
11-25 Mailboxes - \$79
26-50 Mailboxes - \$119
Over 50 Mailboxes - Call
